

Securing Your Network, Securing Your Success

Security Awareness Training and Simulated Phishing Platform

Helps you manage the problem of **social engineering**

Security Awareness Training

Old-school security awareness training doesn't hack it anymore. Today, your employees are frequently exposed to sophisticated phishing and ransomware attacks.

Baseline Testing

We provide baseline testing to assess the Phish-prone™ percentage of your users through a free simulated phishing attack.

Train Your Users

The world's largest library of security awareness training content; including interactive modules, videos, games, posters and newsletters. Automated training campaigns with scheduled reminder emails.

Phish Your Users

Best-in-class, fully automated simulated phishing attacks, hundreds of templates with unlimited usage, community phishing templates and custom templates also available.

See the Results

Enterprise-strength reporting, showing stats and graphs for both training and phishing, ready for management. Show the great ROI!

The System Really Works

After years of helping our customers train their employees to better manage the urgent IT security problems of social engineering, spear phishing and ransomware attacks, we decided to go back, and look at the actual numbers over a 12 month period.

We aggregated the numbers and the overall Phish-prone percentage **drops from an average of 15.9% to an amazing 1.2% in just 12 months.** The combination of web-based training and frequent simulated phishing attacks really works.

Security Awareness Training Features

Security Awareness Training

We offer three Training Levels: Core, Professional, and Advanced, giving you access to our content library of 300+ items based on your subscription level. BAI Security training modules specialize in making sure employees understand the mechanisms of spam, phishing, spear phishing, malware and social engineering.

- Interactive, web-based, on-demand, engaging training
- Create multiple training campaigns as ongoing or with a specified completion date
- Automated enrollment and follow-up emails to “nudge” users who are incomplete
- Auto-enroll new users added to a group or company
- Point-of-failure training auto-enrollment
- Dedicated Hosting Options, or run the course in your own LMS

Phishing

BAI Security's highly effective scheduled Phishing Security Tests keep your employees on their toes with security top of mind. Within the Admin Console you are able to schedule regular Phishing Security Tests from our large library of known-to-work templates, or choose a template from the community templates section where you can also share phishing templates with your peers.

- Year-round simulated phishing attacks
- Full library of successful phishing templates
- Set-it-and-forget-it scheduling of attacks
- Easily create your own templates
- Customizable landing pages
- Customizable “hover-links” when a user “mouse-overs”
- Phishing Reply Tracking allows you to track if a user replies to a simulated phishing email and can capture the information sent in the reply
- Tests for opening MS Office attachments and secondary action of enabling macros
- “Anti-prairie dog” campaigns that send random templates at random times preventing users warning each other
- Phish Alert Button add-in button gives your users a way to report simulated and non-simulated phishing attacks

Reporting and User Management

Our robust reporting capabilities allow you to easily access user training completions, Phish-prone percentage, compliance reports and more.

- Utilize at-a-glance Training Campaigns Dashboard to see campaign status, completion percentage and individual progress
- Specify user needs to “Read and Attest” Security Policy for compliance
- Advanced Phishing Reporting provides powerful features, for instance, a report of phishing failures by group or manager and many more reports
- Top 50 Clickers report
- Filter campaigns by recipient, delivered, opened, clicked, attachment, data entered, bounced, export in CSV
- Phishing Security Test results emailed to admin upon completion
- Our **NEW Active Directory Integration** allows you to easily upload user data and saves you time by eliminating the need to manually manage user changes

Advanced Features

Endpoint Compromise: Allows an internal “human pentest.” Launch a simulated phishing attack - which if clicked on - comes up with a secondary ruse like a Java popup that the user is social engineered to click on. If the user clicks on the secondary action, their workstation can be scanned for several items specified by the admin.

USB Drive Test™: Allows you to test your user's reactions to unknown USBs. You can download a special, file from our admin console onto a USB drive which you can drop at a high traffic area. If an employee picks up the USB drive and uses it, the device will “call home” and report the fail.

GEO-location: See where your simulated phishing attack failures are on a map, with drilldown capability and CSV-export options.

Vulnerable Browser Plugin Detection: Automatically detect what vulnerable plugins any clickers on your phishing tests have installed in their browsers.

New Social Engineering Indicators: Turns every simulated phishing email into a tool IT can use to dynamically train employees by instantly showing them the hidden red flags they missed within that email.
